Are you protecting **ALL** your patients?
Are You Sure?...

Introducing

Give a Small Life
a Bigger Future!

What about the premature babies in your NICU?

Every year more than 450,000 premature babies are born in the U.S. alone. During their long hospital stay, these babies are frequently subjected to numerous xrays, the smaller the infant, the more xrays they receive. During an xray, the nurse wears an apron, the technician stands back 6 feet, shouts "clear" and the parents ask "Why do you protect yourself but not my baby? As a dedicated radiology professional, **you are responsible** to make sure you protect these tiny lives.

As you know, Federal regulations[†] recommend the use of gonadal shielding, and many states require it. In the past, neonates were simply overlooked because shields were not available that met the special requirements for use in this critical care environment.

JCAHO[‡] has patient radiation safety standards in place, however, enforcement in nurseries has not been strict because there was not a suitable shield.

Designed by a Registered Nurse, our shields were created for use in the NICU. This 1mm lead shield, fully encased in a soft satin covering provides more than adequate protection. These tiny shields are heart shaped, designed to be used for both sexes. Heart upright for a girl, flipped down for a boy. They are easily cleansed with alcohol if they become soiled.

A major concern in any critical care area is infection. Sound medical practice dictates that any item that comes in contact with one baby, should *not* be shared with others. When purchased in quantity our shields cost as little as **\$5 each**. This low cost allows each baby to be issued a shield that can be used repeatedly *on that baby*.

Parents ask:

"Why do you protect yourself but not my baby?"

Save the Gonads, Ltd. is a company solely dedicated to protecting babies. If you are currently using gonad shields for neonates, **keep up the good work.** It is the **RIGHT** thing to do! If you do not currently use gonad shields, please consider the ramifications and **somehow, somehow, save those gonads!!**

Whatever your situation, we ask you to consider our product since it is specifically designed for use in the NICU environment.

Thank you for protecting the future by saving little gonads.

Pam Krieg RN

- ♥ Effective protection for both sexes
- ♥ Economical
- ♥ Leaves a heart shape on xrays to show you care
- ♥ Available in Three Sizes
- ♥ Designed for individual use with Infection Control in mind

Save the Gonads, Ltd. is a company created by Pam Krieg, an RN who has worked the last 18 years with premature babies. Searching years for an adequate lead x-ray shield, she found none. So she designed, created and manufactures STG gonad shields.

Pam with Olivia and Sarah Soloria, at a recent NICU Reunion.
